#### **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

## Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1, 6 and 9-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Andou et al. (US 6,007,740 or 6,187,223).

The reference discloses that novel compounds represented by formula (1) are useful for liquid crystal display elements and display modes such as TN, STN and TFT, active matrix and two-frequency driving modes. The reference compositions can be used for guest host (GH) mode, polymer dispersion liquid crystal display element (PDLCD), polymer network liquid crystal display elements (PNLCD), effective control birefringence (ECB) mode or dynamic scattering (DS) mode.

Art Unit: 1756

The Use Examples 24 and 26 anticipate the claimed composition. Use Example 24 comprises the compounds of the present formulae (1-2), (2), (3-1) and (3-2). Use Example 26 comprises the compounds of the present formulae (1-2), (2), (3-1), (3-2), (4-3) and (4-4). The concentration ranges of the reference compounds are within the present ranges. Therefore, the reference anticipates the claimed invention.

### Claim Rejections - 35 USC § 103

4. Claims 2-5, 7-8 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Andou et al. abovementioned.

The reference differs from the claims in that the claims having compounds represented by formulae (1-1) and (1-3) are not exemplified by the reference. However, the present compounds of formulae (1-1) and (1-3) are disclosed by the reference and shown by the formula (1-2-1) and (1-6-4), particularly, the compounds taught in items [4] and [9] on col. 5. Because the compounds of the present formulae (1-1) and (1-3) are disclosed by the reference and having the similar properties as formula (1-2), it would have been obvious to those skilled in the art to admix these disclosed compounds to arrive at the claimed composition and display device thereof.

With respect to Claim 15, it would also have been obvious to those skilled in the art to utilize the reference composition in IPS mode because the reference compositions have a wide temperature range, high-speed response time, low viscosity, low threshold voltage, high contrast ratio and high voltage holding ratio, which are suitable for known IPS mode (see col. 1, lines 16-32 and from col. 1, line 51 to col. 2, line 7).

Application/Control Number: 10/726,292
